

- 14
- c. a lid removeably coupled to the paint compartment having an outer side, an inner opposite side and a small aperture located through the lid from the outer side to the inner opposite side;
 - d. a stirring mechanism removeably coupled to the outer side of the lid having an integrally formed rod located at a central axis of the stirring mechanism, wherein the rod is positioned through the small aperture in the lid to extend into the paint compartment when the lid is positioned over the paint compartment; and
 - e. a fan apparatus removeably coupled to the rod of the stirring mechanism on the inner opposite side of the lid.

17. (Amended) The reusable paint container as claimed in claim 16 wherein the body includes a plurality of mounting slots located on the back for mounting the body to a wall.

22. (Amended) A reusable paint container comprising:

- 15
- a. a body having a first side and a second side, wherein the body is configured for holding paint within one or more integral paint compartments each having a front, a back, a first side and a second side;
 - b. a lid removeably coupled to the paint compartments having an outer side, an inner opposite side and a small aperture located through the lid from the outer side to the inner opposite side;
 - c. a stirring mechanism removeably coupled to the outer side of the lid having an integrally formed rod located at a central axis of the stirring mechanism, wherein the rod is positioned through the small aperture in the lid to extend into a corresponding paint compartment when the lid is positioned over the corresponding paint compartment; and
 - d. a fan apparatus removeably coupled to the rod of the stirring mechanism on the inner opposite side of the lid.
